

RECHARGE®

ORAL REHYDRATION CONCENTRATE SOLUTION

Recharge® is an electrolyte concentration for horses that rapidly restores blood electrolyte and fluid losses following exercise, traveling and sweat loss.

INGREDIENTS

Each 60ml dose contains sodium, chloride, magnesium, glucose, potassium, phosphate and sulfate.

KEY BENEFITS/PROPERTIES

- Specially formulated to counteract fatigue and dehydration after heavy sweat loss.
- Replaces essential salts.
- Contains glucose and glycine which facilitates the uptake of fluids and salts into the bloodstream.
- Stimulates thirst, encouraging water intake after administration.
- Handy portable pack.
- Apple flavoured - can be mixed in water or squirted over the back of the tongue.

MODE OF ACTION

Enhanced absorption of fluid and electrolytes is driven by glucose and the amino acid glycine. The reconstituted solution is isotonic, to avoid any chance of reverse osmosis occurring.

DOSAGE / ADMINISTRATION

Give by mouth using a measuring syringe or add to water as follows:

Light work (up to 30 minutes): 40mL/2L water.
Moderate work (30-60 minutes duration): 60mL/3L water.
Heavy work (e.g. racing): 80mL/4L water.

For a full dosage rate, refer to packaging label.

RECOMMENDED FOR

- Fluid and body salt replacement after exercise.
- Rapid recovery after traveling.
- Encourages drinking at competitions.

PRECAUTIONS

- Stimulates thirst therefore ensure clean, fresh water is made available after dosing.
- Do not administer large volumes of the prepared solution to horses suffering from acute water deprivation.
- Users are encouraged to check with their respective racing authority prior to the use of any supplement or medication.

WITHHOLDING PERIOD

Meat: Nil.

STORAGE

Store below 30°C. Do not freeze. Replace cap tightly after use.

PRESENTATION

1L chamber measure bottles and 5L packs.
